SESD-Assignment-3

G.Sanjansah.

2503A52L20.

**Scenario**: You are hired as a freelance front-end developer. Your client asks for a live personal portfolio website.

**Task**:

- Initialize a local Git repo with git init
- Create index.html with profile content

---

- Track changes using git add, git commit
- Create a GitHub repo (MyPortfolio) and push code
- Deploy via GitHub Pages
- Fix a content typo and push the update

**Submission**: GitHub repo link, live site URL, screenshots, and a summary of Git commands used.

# Aim

To create a personal portfolio website using HTML and CSS, manage the project using Git and GitHub, and deploy it using GitHub Pages.

# Procedure

**Step 1: Initialize Git Repository**

- Created a project folder named `MyPortfolioo`.

- Opened the folder in Visual Studio Code.
- Opened the terminal and executed `git init` to initialize the local Git repository.

**Step 2: Create Portfolio Website**

- Created an `index.html` file.
- Added personal details, education, skills, projects, and contact information.
- Used HTML and CSS to design the portfolio website.
- Saved and tested the website in a web browser.

**Step 3: Track Changes Using Git**

- Executed `git add index.html` to stage the file.
- Executed `git commit -m "Initial portfolio website"` to save the changes.
- Used `git log --oneline` to verify the commit history.

**Step 4: Create GitHub Repository**

- Logged in to GitHub.
- Created a public repository named `MyPortfolio`.
- Connected the local repository to GitHub using `git remote add origin`.
- Uploaded the project using `git push -u origin main`.

**Step 5: Deploy Using GitHub Pages**

- Opened the GitHub repository settings.
- Navigated to the Pages section.
- Selected **Deploy from a branch**.
- Selected the `main` branch and `/ (root)` folder.
- Saved the settings and successfully deployed the website.

**Step 6: Verify Live Website**

- Opened the deployed website in a web browser.
- Verified that the portfolio displayed personal information, skills, projects, and education.

# GitHub Repository Link

https://github.com/sanjansahdev/MyPortfolio

# Live Website URL

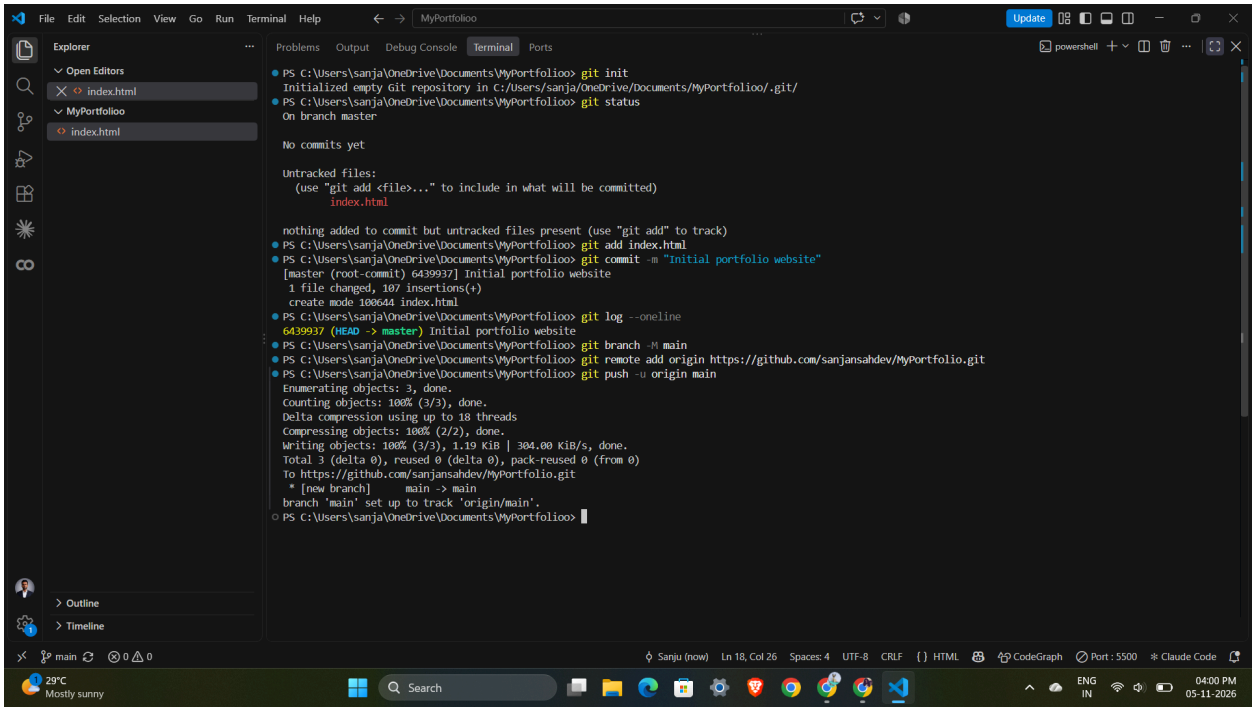

https://sanjansahdev.github.io/MyPortfolio/

# Git Commands Used

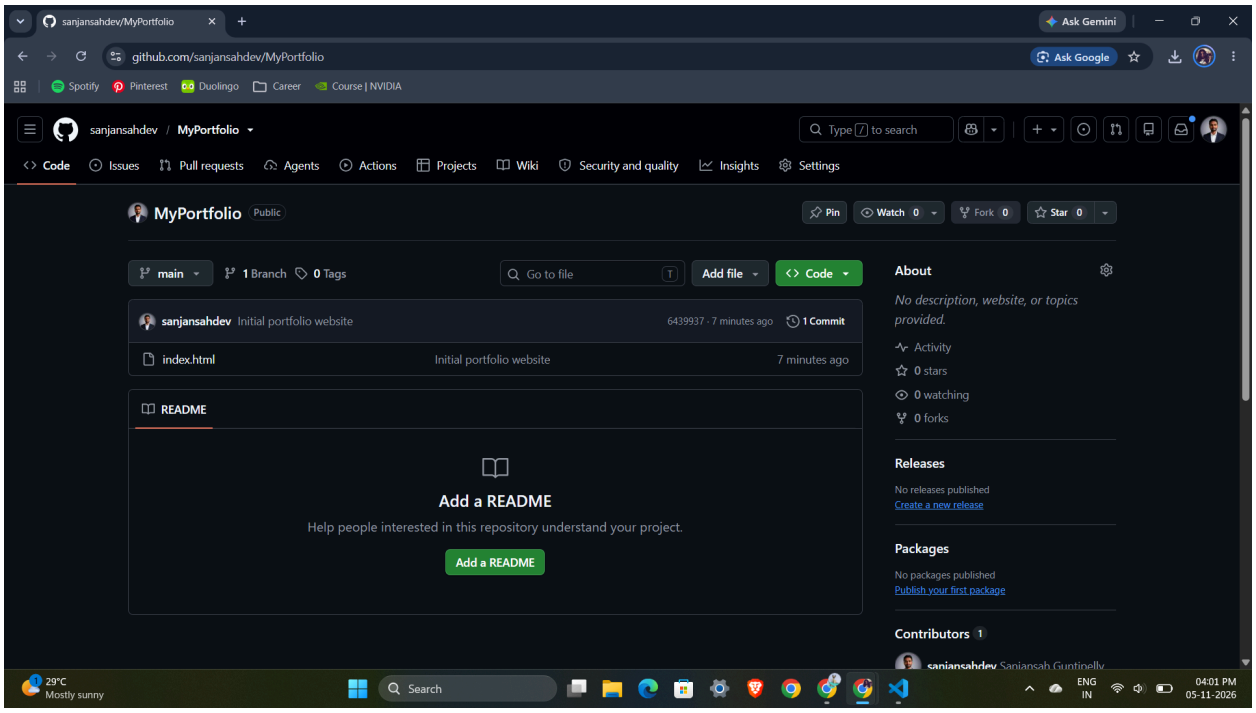

1. `git init` – Initialize Git repository.
2. `git status` – Check repository status.
3. `git add index.html` – Stage the HTML file.
4. `git commit -m "Initial portfolio website"` – Commit changes.
5. `git branch -M main` – Rename the branch.
6. `git remote add origin https://github.com/sanjansahdev/MyPortfolio.git` – Connect GitHub repository.
7. `git push -u origin main` – Upload code to GitHub.

# Output Screenshots

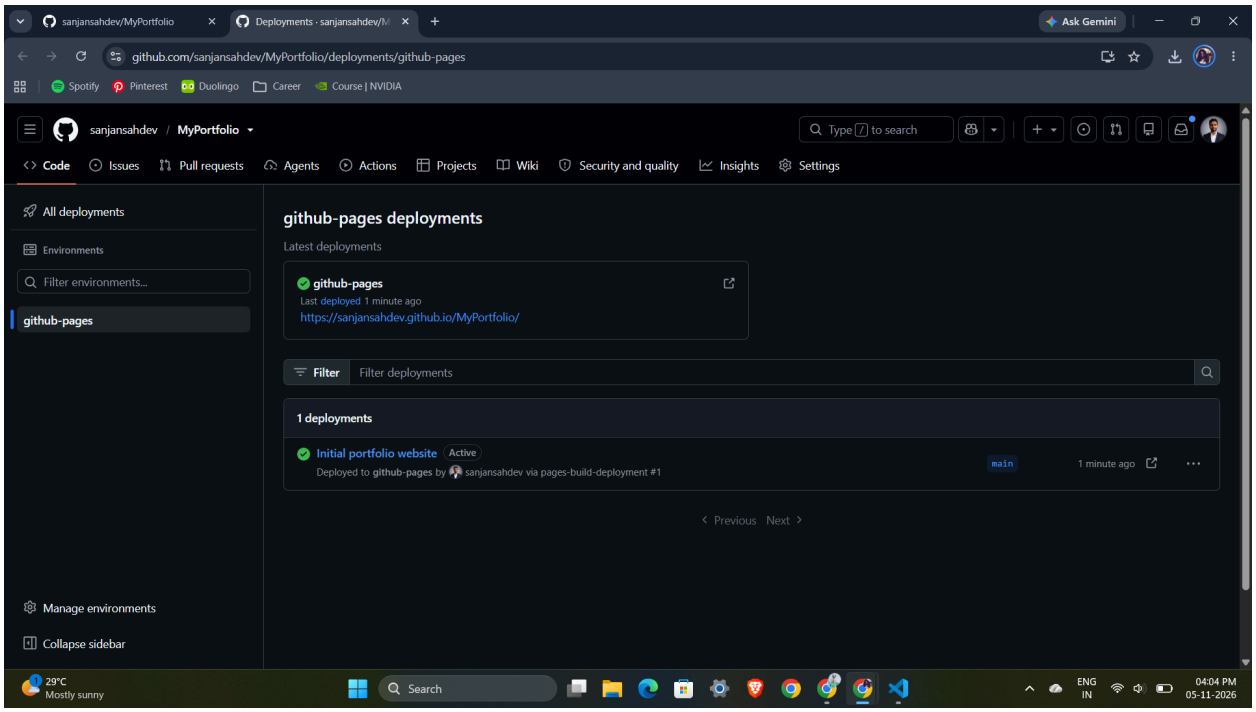

**Screenshot 1:** Git commands executed in VS Code terminal.

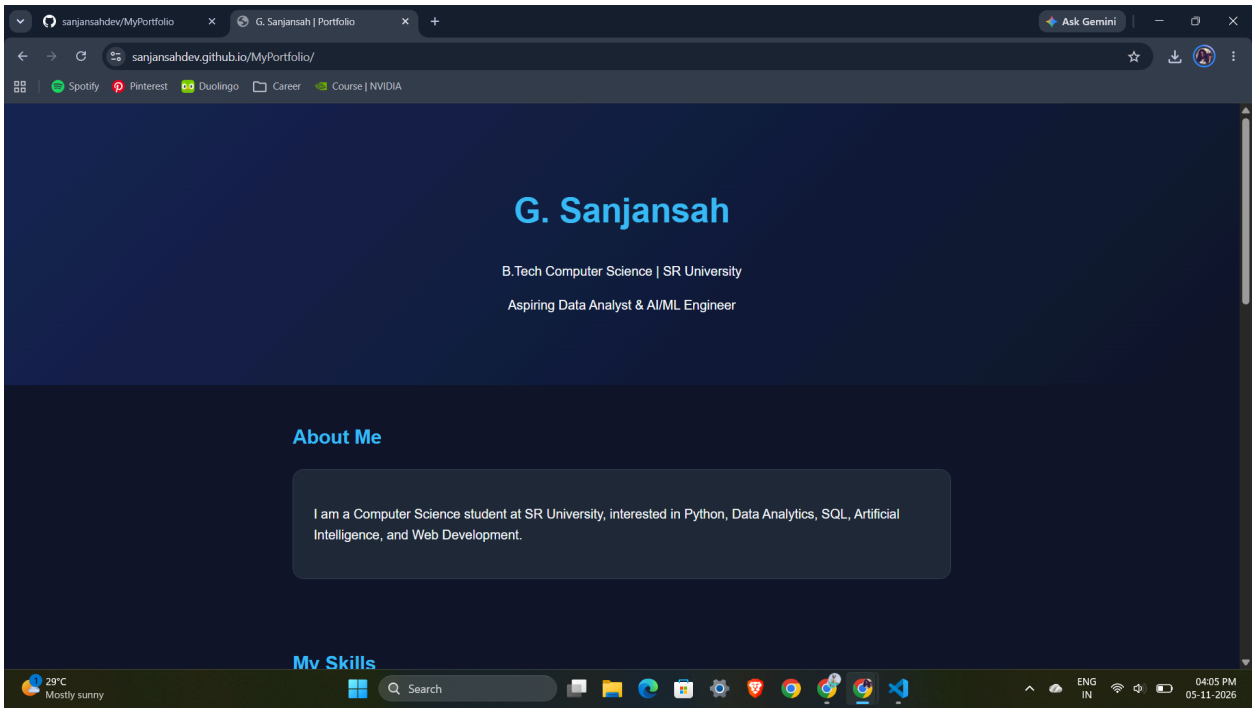

**Screenshot 2:** MyPortfolio repository created on GitHub.

**Screenshot 3:** Successful GitHub Pages deployment.

**Screenshot 4:** Personal portfolio website running in a web browser.

# Result

The personal portfolio website was successfully created using HTML and CSS, uploaded to GitHub using Git commands, and deployed using GitHub Pages.

# Conclusion

This assignment helped in understanding Git version control, GitHub repository management, and website deployment using GitHub Pages.
